SUMMARY

Electrical Engineering freshman at UCCS. I build software and embedded projects, teach what I build, and have been elected to leadership in every volunteer organization I've stayed with for over a year.

PROJECTS

Halle Reviews — Solo Full-Stack Build | Diane & Bruce Halle Foundation, 2026

- AI-assisted grant review app replacing reviewers' improvised Zoom + NotebookLM + ChatGPT workflow; each grant moves through LOI, application, funding, and completion stages with LLM summaries driven by editable Markdown rubrics
- Sole developer, ~6,200 lines of TypeScript/JavaScript in three weeks (React, Vite, Tailwind, Node/Express); multi-provider LLM layer (Anthropic, OpenAI, Google) over streaming SSE with Microsoft Entra ID sign-in

Lightsaber Duel Game — Microchip DevDay Hackathon, Best Project Award | 2026

- Physical dueling game linking a Microchip Curiosity board (CircuitPython, IMU, NeoPixels, LCD, audio) to a browser game via the Web Serial API, streaming motion data as JSON at 10 Hz; shipped three play modes (side-by-side, first-person, combined)
- Only non-intern in a field of college interns; debugged the full stack solo · github.com/kaedenwellman/lightsaber

HU-001C Handheld Game Machine — Wire Lion Engineering Club, UCCS | 2026

- Built a handheld retro 8-bit gaming system around an STC15F2K60S2 microcontroller, LED dot-matrix and 3-digit displays, five push-button inputs, and a buzzer, working from a supplied PCB and schematic
- On the schematic, assembly, and documentation teams: traced the battery-to-ground power path, soldered through-hole parts with correct polarity, and co-wrote the technical summary
- Reworked solder bridges and incomplete through-hole joints, then tested power, display, game switching, and audio

Gyftloop — Co-founder | gyftloop.com

- Live product that tracks birthdays and anniversaries, then emails three tailored gift ideas one week before each occasion
- Vanilla JS on Vercel Edge Functions with Neon Postgres and Auth0 (PKCE); ranks gifts by blending OpenAI embedding similarity, price fit, and ratings

Teen Startup Kits — Founder, Arizona LLC | 2026

- Shopify business selling service-business starter kits for teens 13–18; filed the LLC and designed three-tier pricing and a creator affiliate model

TEACHING & LEADERSHIP

CircuitPython Instructor — Microchip DevDay, Pima Community College | July 2026

- Invited to co-lead the class after winning the hackathon; first student-to-instructor transition in the program's history
- Taught embedded CircuitPython to ~25 college students, most with no prior coding experience, through hands-on projects and one-on-one debugging

Member, Mountain Lion Strong — UCCS student-athlete wellness program | Fall 2026 – Present

Event Coordinator — Arizona Best Buddies Friendship Walk | 2025–2026

Commissioner, Link Crew — Arizona College Prep | 2025–2026

Volunteer Hurdle Coach — youth and middle school hurdlers | 2+ years

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, HTML/CSS

AI & Web: Claude API, OpenAI API, prompt engineering, streaming SSE, React, Vite, Tailwind, Node, Express

Infrastructure & Data: Vercel, Railway, Neon Postgres, Microsoft Entra ID (MSAL, JWT), Auth0 (PKCE)

Embedded & Tools: CircuitPython, Microchip PyKit Explorer & Curiosity boards, IMU/NeoPixel/LCD, Web Serial API, GitHub, Shopify

AWARDS & CERTIFICATIONS

Best Project Award, Microchip DevDay Hackathon (2026) · Superintendent's Outstanding Citizenship Award (2026) · Track & Field MVP (2025) · Anthropic AI Fluency & Claude 101

EDUCATION

University of Colorado Colorado Springs — B.S. Electrical Engineering | Fall 2026 – Present

Division II Track & Field (400m / 110m hurdles)

Arizona College Prep High School — Chandler, AZ | Graduated May 2026, Magna Cum Laude

4.0 UW / 4.36 W · College-level Physics and Calculus
